TITLE

HIGH SPEED MELT SPINNING OF FLUOROPOLYMER FIBERS ABSTRACT OF THE DISCLOSURE

The processes and apparatus of the present invention concerns melt spinning high viscosity fluoropolymers into single filaments or multifilament yarns at high spinning speeds, the melt spinning being carried out at a temperature which is at least 90°C greater than the melting point of the polymer or in the case of perfluoropolymer, at a temperature of at least 450°C, and the yarns produced by the process, wherein the filaments can exhibit an orientation at the surface of the filament no greater than at the 10 core of the filament.
